Art Unit: 1714

Applicant should request correction of continuing data on BIB sheet since the Provisional Application 60/144896 filed on July 21, 1999 is listed under Foreign Applications rather than under Domestic Continuing Data (after PCT).

Cancellation of "alkyl" after "propyl" in line 13 of page 8 is suggested.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The claims 1-10 and 20 are not commensurate in scope with an enabling disclosure until the named groups for "substituted" for R<sup>1</sup> in claims 1 and 20 as described in the instant specification, are recited in the claims for "substituted". If there are no examples for "substituted", in the instant specification, "substituted" must be cancelled because the specification is not enabling for the skilled artisan to practice the invention. It would require undue experimentation to determine all of the groups which are encompassed by "substituted" and how to attach these groups to the claimed compound.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brault et al (US 6,048,604).

Brault et al teach a radiation curable composition comprising an ethylenically unsaturated ammonium salt at col. 4, lines 54-67 which meets the instant ionic surfactant. Brault et al teach employing one or more other polymerizable precursors which function as free radical crosslinking agents such as the instant glycerolpropoxy triacrylate and ethyleneglycol diacrylate at col. 5, lines 12-13. Brault et al further teach employing hydroxyalkyl esters of (meth)acrylic acid at col. 5, lines 27-37. Free radical generating initiating system is taught at col. 6, line 1, and a composition comprising said glycerolpropoxy triacrylate and ethyleneglycol diacrylate is washable since it is not cured.

It would have been obvious to one skilled in the art at the time of invention to utilize said glycerolpropoxy triacrylate (and ethyleneglycol diacrylate or hydroxyethyl acrylate) in a radiation curable composition of Brault et al since Brault et al teach such modification and since choosing species from the disclosed species is a *prima facie* obviousness and since a hydroxyalkyl ester of acrylic acid encompasses a hydroxyethyl acrylate.
